*Vital Decomposition* Kristina M. Lyons 2020-04-17 In Colombia, decades of social and armed conflict and the US-led war on drugs have created a seemingly untenable situation for scientists and rural communities as they attempt to care for forests and grow non-illicit crops. In Vital Decomposition Kristina M. Lyons presents an ethnography of human-soil relations. She follows state soil scientists and peasants across labs, greenhouses, forests, and farms and attends to the struggles and collaborations between farmers, agrarian movements, state officials, and scientists over the meanings of peace, productivity, rural development, and sustainability in Colombia. In particular, Lyons examines the practices and philosophies of rural farmers who value the decomposing layers of leaves, which make the soils that sustain life in the Amazon, and shows how the study and stewardship of the soil point to alternative frameworks for living and dying. In outlining the life-making processes that compose and decompose into soil, Lyons theorizes how life can thrive in the face of the violence, criminalization, and poisoning produced by militarized, growth-oriented development.

**The Macroeconomics of Populism in Latin America** Rudiger Dornbusch 2007-12-01 Again and again, Latin America has seen the populist scenario played to an unfortunate end. Upon gaining power, populist governments attempt to revive the economy through massive spending. After an initial recovery, inflation reemerges and the government responds with wage an price controls. Shortages, overvaluation, burgeoning deficits, and capital flight soon precipitate economic crisis, with a subsequent collapse of the populist regime. The lessons of this experience are especially valuable for countries in Eastern Europe, as they face major political and economic decisions. Economists and political scientists from the United States and Latin America detail in this volume how and why such programs go wrong and what leads policymakers to repeatedly adopt these policies despite a history of failure. Authors examine this pattern in Argentina, Brazil, Chile, Mexico, Nicaragua, and Peru—and show how Colombia managed to avoid it. Despite differences in how each country implemented its policies, the macroeconomic consequences were remarkably similar. Scholars of Latin America will find this work a valuable resource, offering a distinctive macroeconomic perspective on the continuing controversy over the dynamics of populism.

*bookdown* Yihui Xie 2016-12-12 bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

**The Forever Swim** Antonio Argüelles 2020-04-21 Plunge into the water, accompany Antonio Argüelles on his Oceans Seven adventure, and, along the way, find out how to achieve your own dreams and goals. On August 3, 2017, Antonio Argüelles swam 35 kilometers from Northern Ireland to Scotland. When he arrived on the Scottish shore after a swim of nearly 14 hours through hypothermic currents wearing only a speedo, cap, and goggles, he became just the seventh person ever to conquer the Oceans Seven, an aquatic achievement on par with the Seven Summits. His feat made international news, in part because at 58 years old, he became the oldest athlete ever to complete the challenge. Despite all warnings and his own self-doubt, he endured stormy seas, 24-hour swims, venomous jellyfish blooms, and a host of other hazards to accomplish his dream. But no goal seized is an isolated incident, and Antonio's story is no exception. The Forever Swim is not only a tale of success; it is also the tale of how a hyperactive overweight boy would discover swimming, chase an Olympic dream, attend Stanford, and wade into the tangled web of Mexican politics. This is a story of risk, fear, confidence, failure, and loss. It shows how the ability to adapt, focus, and manage the mind enabled Antonio to overcome each setback that sought to take him down in and out of the water. The Forever Swim illuminates key strategies anyone can utilize to pursue their own goals and reminds us that no dream, however bold, is ever out of reach, as long as we are willing to chase it down with relentless discipline and joy.

**Cost Accounting and Financial Management for Construction Project Managers** Len Holm 2018-08-15 Proper cost accounting and financial management are essential elements of any successful construction job, and therefore make up essential skills for construction project managers and project engineers. Many textbooks on the market focus on the theoretical principles of accounting and finance required for head office staff like the chief financial officer (CFO) of a construction firm. This book's unique practical approach focuses on the activities of the construction management team, including the project manager, superintendent, project engineer, and jobsite cost engineers and cost accountants. In short, this book provides a seamless connection between cost accounting and construction project management from the construction management practitioner's perspective. Following a complete accounting cycle, from the original estimate through cost controls to financial close-out, the book makes use of one commercial construction project case study throughout. It covers key topics like financial statements, ratios, cost control, earned value, equipment depreciation, cash flow, and pay requests. But unlike other texts, this book also covers additional financial responsibilities such as cost estimates, change orders, and project close-out. Also included are more advanced accounting and financial topics such as supply chain management, activity-based accounting, lean construction techniques, taxes, and the developer's pro forma. Each chapter contains review questions and applied exercises and the book is supplemented with an eResource with instructor manual, estimates and schedules, further cases and figures from the book. This textbook is ideal for use in all cost accounting and financial management classes on both undergraduate and graduate level construction management or construction engineering programs.

**New Policies for Mandatory Defined Contribution Pensions** Gregorio Impavido 2010-06-04 Mandatory defined contribution pension markets are present in a growing number of countries around the world. But despite their popularity, policymakers continue to struggle with two key policy concerns. On the one hand, a number of design shortcomings encourages pension firms to charge high administrative fees. On the other hand, the global crisis that started in 2007 has reignited the debate on whether pension participants bear excessive investment risk. Both are valid policy concerns as their incidence can imply higher than expected levels of poverty among old age individuals. Both concerns have the same root problem—the limited capacity of individuals to choose what is best for them. This, in turn, stems from a combination of inadequate financial education, bounded rationality and the use of simplistic ‘rules of thumb’ that produce systematic biases in the decision making process of individuals. While improving financial education is an obvious avenue to pursue, this book is more concerned with design features that can exploit these systematic biases to protect consumers from themselves. ‘New Policies for Mandatory Defined Contribution Pensions: Industrial Organization Models and Investment Products’ (i) discusses the main implications for the functioning of mandatory defined contribution pensions of consumers inability to make rational choices; (ii) describes how jurisdictions have tried to address these problems through ad hoc policy

interventions; and (iii) proposes new policy directions in the areas of industrial organization models and investment products to address these concerns more effectively. Written for practitioners and researchers around the world, this book provides access to new thinking on mandatory defined contribution pension systems and it makes an important contribution to the on-going policy debate on how to best structure mandatory defined contribution pillars.

**Continuous Cover Forestry** Timo Pukkala 2011-10-14 Although the majority of the world’s forest ecosystems are dominated by uneven-sized multi-species stands, forest management practice and theory has focused on the development of plantation monocultures to maximize the supply of timber at low cost. Societal expectations are changing, however, and uneven-aged multi-species ecosystems, selectively managed as Continuous Cover Forestry (CCF), are often believed to be superior to monocultures in addressing a wide range of expectations. This book presents methods which are relevant to CCF management and planning: analysing forest structures, silvicultural and planning, economic evaluation, based on examples in Europe, Asia, Africa and North and South America.

**Activity Accounting** James A. Brimson 1997-07-21 New costing procedures for a new economic age Increasing global competition is causing upheaval in every area ofindustry and commerce. An explosion in the use of advancedtechnologies is continuing to fundamentally revolutionize the waywe go about doing business. These factors are in turn drivingdramatic reductions in product life cycles (the average productlife cycle is now well under five years) and exerting tremendouspressure on profit margins. The effect has been to substantiallychange cost structures with their traditional focus on direct laborand arbitrary allocation of overhead. Yet we continue to measurecost in the old way. Now, here’s a book that shows you how to update your accountingprocedures in order to effectively accommodate these significantchanges. Step by step, Activity Accounting: An Activity-BasedCosting Approach describes activity accounting in a clear, concisemanner. It emphasizes the strengths and benefits of anactivity-based approach to business management and demonstrates howyou can apply activity accounting to your organization. Activity-based accounting is an essential tool for running yourbusiness in the 90s. This book is a must-have tool for learning howto master it.

**Ecosystem Ecology and Geochemistry of Cuatro Ciénegas** Felipe García-Oliva 2018-10-12 Carbon (C), Nitrogen (N) and Phosphorus (P) are three of the most important elements used to build living beings, and their uptake from the environment is consequently essential for all organisms. Photosynthesis is the process in which plants absorb atmospheric C as they grow and convert it to biomass. However, plants acquire N and P only when these are available in the soil solution, which makes these elements the most limiting nutrients in plant growth and productivity in most ecosystems. When plant residues and roots decompose, the C, N and P they contain is transformed primarily into soil organic matter (SOM) or C and N can release to the atmosphere. Recent interest on the global C, N and P cycles has focused attention on the different proportion of terrestrial C, N and P stored in different ecosystem pools. Cuatro Ciénegas represents an exceptional place, since the plants are not the base of the food web, they are the microbial community, that recycle the elements essential for life. In this book we describe how this is an analog of early Earth.

**Introduction to Management Accounting, Chap. 1-14** Charles T. Horngren 2004-03 Make the right decisions with Horngren/Sundem/Stratton! Horngren/Sundem/Stratton's best-selling texts emphasize decision-making throughout each chapter. Decision-making is introduced in the early text chapters and also appears in many of the text features: "Making Managerial Decisions" boxes, critical thinking exercises, and more. As always, students develop a solid understanding of costs and cost behavior and the use of cost information for planning and control decisions, not just inventory valuation. Two text versions enable faculty to select a text that only covers management accounting concepts (Chs. 1-14) or one that includes three chapters of financial accounting review (Chs. 1-17). New OneKey provides the convenience of having all text resources in a single location and available in your choice of course management platform: BlackBoard, WebCT, and CourseCompass. OneKey also includes PH Grade Assist on-line homework with automatic grading and infinite practice for students).

**Upgrading SAP@ Maurice Sens** 2010-08-01 The purpose of this book is to remove the veil of secrecy surrounding SAP upgrade techniques and concepts, and to provide the user with a detailed description of the steps needed for a successful implementation. Today more than 12 million people in 120 countries who are working for 36,200 companies are using SAP on a regular basis. This popular, but very complex software system must be constantly reconfigured and upgraded to accommodate its latest releases. Upgrading SAP provides a complete overview of the process to upgrade from one SAP release to the next one and explains with detailed descriptions, the use of all relevant SAP upgrade tools. Along with a technical description of the SAP NetWeaver Application Server (AS), it also discusses personnel issues and the economic ramifications of such an upgrade project. Examples in this book are based on various different SAP products and releases, such as SAP NetWeaver 2004, 2004S (also known as NetWeaver 7.0 and 7.1), and SAP Business Suite 2005 with SAP ERP 6.0, BI, CRM, SCM, and SRM. Conceived as both a teaching book and as a reference manual, it covers all the techniques, background information, notes, tips, and tricks needed for any SAP upgrade project. A CD-ROM accompanies the book with templates and outlines for the upgrading process, as well as third-party SAP-related material.

**Managing oil palm landscapes** Lesley Potter 2015-05-26 This study comprises a review of oil palm development and management across landscapes in the tropics. Seven countries have been selected for detailed analysis using surveys of the current literature, mainly spanning the last fifteen years. Indonesia and Malaysia are the obvious leaders in terms of area planted and levels of production and export, but also in literature generated on social and environmental challenges. In Latin America, Colombia is the dominant producer with oil palm expanding in disparate landscapes with a strong focus on palm oil-based biodiesel, and small-scale growers and companies in Peru and Brazil offer contrasting ways of inserting oil palm into the Amazon. Nigeria and Cameroon represent African nations with traditional groves and old plantations in which foreign [land grants] to establish new oil palm have recently occurred.

*Shining Path of Peru* David Scott Palmer 1992-05-01 The Shining Path (Sendero Luminoso) guerrilla movement emerged in Peru in the 1980s as the most radical and dogmatic expression of Marxist revolution in the Western Hemisphere. Led by a former philosophy professor at the University of Huamanga in Ayacucho, it developed its militantly orthodox Maoist principles from the mid-1960s onward with a small band of committed supporters, virtually ignored by the outside world. But after more than 20,000 deaths and \$20 billion in damage in over a decade of relentless pursuit of the people's war, Sendero is now taken very seriously indeed. This is the first book in English to provide a truly comprehensive view of Shining Path. To do so, it brings together fifteen scholars, journalists, and development workers from Peru, the United States, and Europe who, from a variety of perspectives and disciplines, have studied one facet or another of Sendero. The underlying rationale for this edited study is that Shining Path forms such a distinct phenomenon that no single author can capture the full scope of the movement. Presented together, however, they succeed.

**Fisheries Bioeconomics** J.C. Seijo 2001 The overutilization of fish stocks, the overcapitalization of fisheries, the removal of associated benefits to society and growing concern over the conservation of marine biodiversity have resulted in a line of fisheries research that is multidisciplinary, dynamic and precautionary in approach. All the biological, ecological and economic factors need to be analysed if the forces regulating the dynamics of a fishery are to be appraised. This publication looks at the assumptions underlying the optimal allocation of renewable natural resources; lists the bioeconomic points of reference resulting from analysis of fisheries is supposed conditions of equilibrium; analysis bioeconomic models according to ecological interdependence factors (such as competition and predation) and technological factors (such as competition between fleets with different fishing capacity); offers a time-series analysis of fisheries and estimates the level of optimal effort; proposes mathematical models applied to bioeconomic analysis to support fisheries management plans; refutes the assumption of uniform resource distribution, incorporating a spatial dimension in fisheries dynamics analysis; and expounds basic elements of decision-making theory and criteria that reflect different attitudes to risk aversion in fisheries management. Contents: Chapter 1: Inherent Characteristics of Fish Stocks, (1) Optimal Allocation of Renewable Resources: Basic Assumptions, (2) The Failure in the Optimal Allocation of Fishery Resources, (3) Fisheries Management Plans, (4) A Closing Comment, Chapter 2: Bioeconomic Models, (1) The Gordon-Schaefer Model, (2) Fleet Dynamics: A Distributed-Delay Smith s Model, (3) Yield-Mortality Models: A Bioeconomic Approach, (4) Age-Structured Bioeconomic Models, (5) Intertemporal Fisheries Analysis, Chapter 3: Ecological and Technological Interdependencies, (1) Technological Interdependencies: Heterogenous Fishing Effort, (2) Technologically Interdependent Fisheries: Two Fleets, (3) Technological Interdependencies: Sequential Fisheries, (4) Bioeconomics of Ecologically Interdependent Stocks, (5) Techno-Ecological Interdependencies, (6) Multispecies Fisheries and Experimental Management, Chapter 4: The System Science Approach in Fisheries Bioeconomics, (1) The System Simulation Approach, (2) A Numerical Example, Chapter 5: Management, (1) State Intervention Criteria, (2) Management Strategies, (3) Multiple Criteria Optimization Approach for Fisheries Management, Chapter 6: Spatial Bioeconomic Models, (1) Spatial Allocation of Fishing Intensity, (2) Short-Run Spatial Dynamics: ALLOC Model, (3) Short and Long-Run Geographic Bioeconomic Dynamics: CHART Model, (4) A Spatial Bioeconomic Model for Sedentary Fisheries: The Yellow Clam Mesodesma mactroides of Uruguay, a Study Case, Chapter 7: Risk and Uncertainty: A Precautionary Approach, (1) Precautionary Approach to Fisheries Management, (2) Sources of Uncertainty in Fisheries, (3) Management Decisions without Mathematical Probabilities, (4) Management Decisions with Mathematical Probabilities, (5) Estimation of Uncertainty in Model Parameters.

*Living in Indigenous Sovereignty* Elizabeth Carlson-Manathara 2021-04-15 In the last decade, the relationship between settler Canadians and Indigenous people has been fundamentally changed by the Truth and Reconciliation Commission, the National Inquiry into Missing and Murdered Indigenous Women and Girls, the Idle No More movement, the Wet'suwet'en struggle against pipeline development, and a number of other Indigenous-led struggles for Indigenous sovereignty and decolonization. As a result of these efforts, increasing numbers of Canadians are beginning to recognize how this nation's history continues to shape relationships on these lands today. While this recognition is an important step, it is only the first step. Many Canadians are now asking, what can I do? Living in Indigenous Sovereignty shares the wisdom of Indigenous scholars, activists, and knowledge keepers who speak pointedly to what they are asking of non-Indigenous people. It also shares the experiences of thirteen white settler Canadians who are deeply engaged in solidarity work with Indigenous peoples. Together, these stories offer inspiration and guidance for settler Canadians who wish to live honourably in relationship with Indigenous peoples, laws, and lands. If Canadians truly want to achieve this goal, Carlson and Rowe argue, they need to "live in Indigenous sovereignty"-- live in an awareness that these lands contain relationships, laws, protocols, stories, obligations, and opportunities that have been understood and practiced by Indigenous peoples since time immemorial. Collectively, these stories will help settler Canadians understand what steps can and must be taken if we are to upend current relations and find a new way forward, together.

**Forbearance as Redistribution** Alisha C. Holland 2017-06-16 The book explains why and when laws go unenforced in developing countries. It argues that the tolerance of street vending and squatting is a form of informal welfare provision and a more effective means to mobilize the poor than conventional state social policies.

*Tropical Montane Cloud Forests* Lawrence S. Hamilton 2012-12-06 Until relatively recently the valuable tropical montane cloud forests (hereaf ter usually referred to as TMCFs) of the world had scarcely come under the assaults experienced by the downslope montane and lowland forests. TMCFs are not simply the environment for human occupation, and their remoteness (except in places near Andean high mountain settlements and in the Ethiopian Highlands) and difficult terrain have given them de facto protection. The ad jacent upper montane rain forests have indeed been under assault for timber, fuelwood, and for conversion to grazing and agriculture for many decades, even centuries in the Andes, but true cloud forest has only come under ex ploitation as these lower elevational resources have disappeared. They have also been "nibbled" at from above where there have been alpine grasslands under grazing pressure. Increasingly now, however, these cloud forest eco systems are being fragmented, reduced, and disturbed at an alarming rate. It is now becoming recognized that steps must be taken rapidly to increase our understanding of TMCF and to achieve their conservation, because: their water-capture function is extremely important to society; • their species endemism is high; they serve as refugia for endangered species being marginalized in these environments by increasingly transformed lower elevation ecosystems; they are relatively little studied; yet, their value to science is extremely high; they have low resilience to disturbance; vii viii Preface and many other reasons, which will be discussed subsequently in this publi cation.

*Keeping the Promise of Social Security in Latin America* Indermit S. Gil 2004-10-25 Empirical analysis of two decades of pioneering pension and social security reform in Latin America and the Caribbean shows that much has been achieved, but that critical challenges remain. In tackling this unfinished agenda, a great deal can be learned from the reform experience of countries in the region. ‘Keeping the Promise,’ produced by the chief economist’s office for the Latin America and Caribbean region at the World Bank, evaluates policy reforms in 12 countries, points to successes and shortcomings, and proposes priorities and options for future reform.
